MFADD-HF: Metabolomic Pathways to Fatigue, Anxiety, Depression, and Dyspnea in Black Adults with Heart Failure and Hypertension

Brittany Butts, PhD

You can make a difference by joining the Metabolic Pathways and Symptoms Study.

Researchers from the Emory University School of Nursing are seeking Black or African-American volunteers between the ages of 30-80 to participate in a study designed to understand symptoms in persons living with heart failure.

Participation involves:

- 1 study visit -100% remote or in-person
- Finger stick for blood collection
- Questionnaires about symptoms and food intake
- Stool sample (at home)

Eligibility Requirements:

- Self-identify as Black or African American
- Between 30-80 years of age
- Diagnosis of heart failure

You will receive \$50 for completing the visit in compensation for your time.
